

2024 Developing Junior Program

This program is designed for the junior who would like to improve their skills and overall knowledge of their game. Included will be swing biomechanics development using a state-of-the-art swing capture technology. This will accelerate the student's own learning curve by seeing their swing on a super slow-motion camera compared to a model swing.

Also included in this program will be the development of putting, chipping, pitching, sand play, specialty shots around the green, playing in the wind and some on course training. The junior will also learn how to practice with a purpose while developing their ability to visualize, staying calm when faced with a difficult situation, strategies to "staying in the now" and much, much more.

The contents of the developing junior program will most certainly improve their skills in all areas of the game giving them the best chance to lower scores and increase their overall enjoyment of the game. Whether you are interested in playing competitive golf or simply wanting to play at a higher level than your buddies, this program is designed for you. All participants can also participate in the junior program at no additional cost except for the year end banquet.
